

Light Symposium Wismar 2020/21 (LSW 2020/21) is a three day online forum that will bring together recent insights into future of daylight & artificial lighting in healthy built environments with respect to research, theory, technologies, design, and applications. Following the popular symposia in 2008, 2010, 2012, 2015, 2016 and 2018 in Wismar and Stockholm, it aims to deliver a state-of-the-art outline of how daylight and artificial light affect human beings' physical and mental health, in natural and built environments. The symposium offers an outstanding occasion for researchers, students, and practitioners to keep up-to-date with recent findings.

LSW 2016: The goal of the symposium was to present the effects of light and lighting in daily life.
